ABOUT ME

Computer Engineering student focused on Machine Learning and AI, with hands on experience building end-to-end applications in machine learning, RAG and backend development. Built AI systems for data analytics, codebase understanding, and document intelligence using Python and modern ML tools.

EDUCATION

St. Francis Institute of Technology Mumbai, India
B.E. Computer Engineering 2023 – 2027

Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming, DBMS, Operating Systems

TECHNICAL SKILLS

Languages: C++, Python, SQL, C
ML & Data: NumPy, Pandas, Scikit-learn, XGBoost, Regression, Classification, Clustering
Frameworks & Tools: FastAPI, Flask, SQLite, MySQL, Streamlit, Git, GitHub, Anaconda

PROJECTS

Business Analyst GitHub
Python, Pandas, Scikit-learn, LLMs, RAG, Sentence Transformers, FAISS, Streamlit

- Built an AI powered data analytics system that preprocesses tabular datasets, performs automated EDA, and generates data driven insights.
- Developed ML and preprocessing pipelines for missing value handling, outlier treatment, categorical encoding, model evaluation, and feature importance analysis.
- Implemented RAG based dataset conversations and natural language analytics to answer questions requiring additional computations on uploaded data.

CodeInsight GitHub
Python, Tree-sitter, Sentence Transformers, RAG, SQLite

- Built a RAG based codebase understanding assistant that analyzes GitHub repositories and helps developers understand unfamiliar codebases.
- Implemented repository ingestion, Tree-sitter AST analysis, extraction of functions, classes, and imports, and semantic chunking while preserving code structure.
- Developed code embedding and Cosine similarity search pipelines using Sentence Transformers and SQLite to retrieve relevant code context for developer queries.

DaibetoScan GitHub
Python, Scikit-learn, Flask, Pandas

- Built a machine learning based diabetes prediction system using Logistic Regression to classify diabetes risk from clinical health indicators.
- Implemented data preprocessing and feature scaling using StandardScaler and integrated the trained model into a Flask based web application for real time predictions.
- Developed a user friendly interface to collect patient inputs and return predicted diabetes class along with the corresponding prediction probability.
